Earth Science Unit 2 Oceans Flashcards | Quizlet

Significance of the Oceans. Earth would not be the same planet without its oceans. Moderates Climate. The oceans, along with the atmosphere, keep temperatures fairly constant worldwide. While some places on Earth get as cold as -70 o C and others as hot as 55 o C, the range is only 125 o C. On Mercury temperatures go from -180 o C to 430 o C, a range of 610 o C.

Introduction to the Oceans | Earth Science

Just by looking at images of Earth from space, it's clear that the ocean is a significant piece of the Earth's story. In fact, the ocean represents over 70% of the Earth's surface and contains 97% of all water on Earth. The ocean stores heat like a "fly wheel" for climate. Its huge capacity as a heat and water reservoir moderates the climate of Earth.
