Aphasia, language, and theory of mind | Request PDF

Aphasia is a language disorder that happens when you have brain damage. Your brain has two halves. Language skills are in the left half of the brain in most people. Damage on that side of your brain may lead to language problems.

Aphasia - American Speech-Language-Hearing Association

Aphasia is not caused by damage to the brain that results in motor or sensory deficits, which produces abnormal speech; that is, aphasia is not related to the mechanics of speech but rather the individual's language cognition (although a person can have both problems, particularly if they suffered a hemorrhage that damaged a large area of the brain). An individual's "language" is the socially shared set of rules, as well as the thought processes that go behind verbalized speech.

Aphasia - Wikipedia

Aphasia Theories It was difficult to find a theory of aphasia that met all these criteria, but one that generally has the features of a good theory is the localizationist theory of aphasia. It has its roots in 19th century aphasiology and has been further elaborated by others (e.g., Goodglass and Kaplan, 1983).
