## **Apostol Complete Solution Calculus**

Hi. I'm just finishing Chapter 7 tonight (still 2 more problems). I'll start on Chapter 8 tomorrow. The plan is to average 5 problems per day over the course of each month (if you look at the archives on the side you'll see that each month has 150 or 155 entries), which means I'll finish volume 1 on

integration. The first documented systematic technique capable of determining integrals is the method of exhaustion of the ancient Greek astronomer Eudoxus (ca. 370 BC), which sought to find areas and volumes by breaking them up into an infinite number of divisions for which the area or volume was known. This method was further developed

# Get Free Apostol Complete Solution Calculus

The calculus solution begins with a general expression (Eq. 1 above) for the system center of mass,  $x$ , as a function of the amount of liquid in the can (or the height of liquid in the can,  $h$ ). Then set  $dx/dh = 0$ . Solve the quadratic equation to find the minimum value of  $x$ . This is a lengthy and messy solution. You will need to use L'Hospital's rule.
