Of the most important things we can do with heat is to use it to do work for us. A heat engine does exactly this—it makes use of the properties of thermodynamics to transform heat into work. Gasoline and diesel engines, jet engines, and steam turbines that generate electricity are all examples of heat engines.

The first law of thermodynamics is a general result that is thought to apply to every process in nature which proceeds between equilibrium states. It tells us that energy must be conserved in every process but it does not tell us whether any process that conserves energy can actually
