Linear algebra is the branch of mathematics concerning linear equations such as:  $ax + by = c$ , linear maps such as:  $(x, y) \mapsto ax + by$ , and their representations in vector spaces and through matrices.. Linear algebra is central to almost all areas of mathematics. For instance, linear algebra is fundamental in modern presentations of geometry, including for defining basic objects such as lines, planes ...

The kernel of  $L$  is a linear subspace of the domain  $V$ . In the linear map  $L : V \rightarrow W$ , two elements of  $V$  have the same image in  $W$  if and only if their difference lies in the kernel of  $L$ :  $v_1 - v_2 \in \ker L$ . From this, it follows that the image of  $L$  is isomorphic to the quotient of  $V$  by the kernel:  $V / \ker L$ . In the case where  $V$  is finite-dimensional, this implies the rank-nullity theorem:
