stable. It is difficult to  
remove any electrons  
from a stable ring or to  
insert others into it.  
Atoms combine by  
virtue of the electrons  
in the outermost rings:  
for example an atom  
with one electron in  
the outermost ring will  
willingly combine with  
another whose  
outermost ring requires  
one electron for  
completion.
