Solving Rational Equations Algebra

equation is a type of equation where it involves at least one rational expression, a fancy name for a fraction. The best approach to address this type of equation is to eliminate all the denominators using the idea of LCD (least common denominator). By doing so, the leftover equation to deal with is usually either linear or quadratic.

Solving Rational Inequalities. The key approach in solving rational inequalities relies on finding the critical values of the rational expression which divide the number line into distinct open intervals.

File Type PDF Solving Rational Equations Algebra

The critical values are simply the zeros of both the numerator and the denominator. You must remember that the zeros of the denominator make the rational expression undefined, so they must be immediately disregarded or excluded as a possible solution.

File Type PDF Solving Rational Equations Algebra **ChiliMath**

In this section, we look at rational equations that, after some manipulation, result in a linear equation. If an equation contains at least one rational expression, it is considered a rational equation.. Recall that a rational number is the ratio of two numbers, such as $\frac{2}{3}$ or $\frac{7}{2}$. A rational expression is
