Derivations. Euler's formula can be established in at least three ways. The first derivation is based on power series, where the exponential, sine and cosine functions are expanded as power series to conclude that the formula indeed holds.. The second derivation of Euler's formula is based on calculus, in which both sides of the equation are treated as functions and differentiated accordingly.

Data Vault Modeling is a database modeling method that is designed to provide long-term historical storage of data coming in from multiple operational systems. It is also a method of looking at historical data that deals with issues such as auditing, tracing of data, loading speed and resilience to change as well as emphasizing the need to trace where all the data in the database came from.
